# WHOIS for Domain Information Gathering

WHOIS is one of the most fundamental tools in passive reconnaissance. It allows you to retrieve publicly available information about a domain name, such as the owner, registrar, creation and expiration dates, and contact information.

When you enter a domain, WHOIS can return information like:

- Registrar: The company where the domain is registered.
- Registration dates: When the domain was created and when it expires.
- Name servers (NS): The DNS servers hosting the domain.
- Registrant contact: Email, phone number, or organization (if not protected by privacy services).
- Technical and administrative contacts.

Note: Many domains now use privacy protection, so personal contact details may be hidden.
